DEEPA Stone Group

DEEPA in Sanskrit means “brightness” and in Pahlavi means “stone”.

DEEPA has been involved in the mining, processing and distribution of stone for more than 40 years and is trying to provide good services to the construction projects by managing the supply chain of mining

- DESIGN & CONSULTING
- SUPPLY
- INSTALLATION
- MAINTENANCE

stone to the project.

DEEPA is a subsidiary of the ArmeGroup Building Holding, which cooperates with the collections of this holding in providing services to the ArmeGroup projects.

HISTORY

ARME GROUP

- ArmeBon Prestress Structure
- ArmeDeck Inovative Structure
- FaraBana Novin Qeshm
- **Deepa Stone Group**

Infrastructure

- DEEPA Stone Group consists of two mines, two rock processing factories with Italian production lines, a stone warehouse and a headquarter in Tehran.

- Jandagh Marble Mine
- Borujerd Crystal Mine

- Hajjar Stone Factory
- Raouf Stoner Factory

- Tehran Central Office
- Tehran Warehouse (Azadegan)

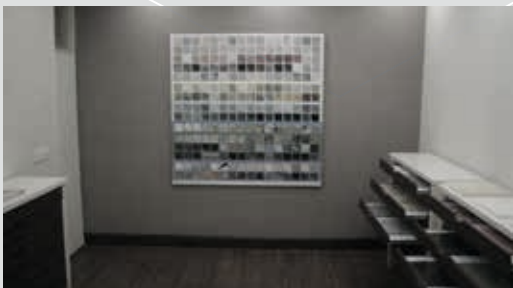

In two DEEPA mines, brown marble and crystal are extracted.

Factory

In **DEEPA FACTORIES**, in addition to processing the minerals extracted from the mines, other marble and travertine stones are also processed. DEEPA's factories are equipped with the most up-to-date stone processing machines from the most reputable brands in the industry.

Store

TEHRAN WAREHOUSE has been considered for the possibility of visiting customers from the imported and manufactured stones of the DEEPA.

Office

THE HEADQUARTERS is located in Tehran for more close and more effective communication with customers. At DEEPA's headquarters, consultancy services are provided to employers and their consultants to select stones, so that they can choose the best according to different criteria.

The background of the image is a piece of marbled paper with a warm, earthy color palette. It features swirling patterns of light beige, tan, and muted olive green, with occasional veins of a darker, reddish-brown hue. The texture appears slightly grainy and organic, typical of traditional marbling techniques.

CREATIVITY IN DESIGN & ARCHITECTURE

F

ields of Activity

- Stone for Projects
- Stone for Special Usages
- Export

There are three main fields of service in the DEEPA:

- Consulting, supply and installation of stone for construction projects
- Supply of stone for specific uses (countertop, floor of elevator cabin, pool table and ...)
- Stones export

Stone For Project

Stone is one of the most important materials used in buildings. Selection of natural stone should be done carefully and accurately with appropriate choices, in order to increase the durability, beauty and permanency of the structure and reduce the cost of repairs and restoration. Consultants and executives of construction projects are often faced with the problem of choosing the right stone and often make their choice on the basis of the hearings, while each project has its own unique profile and the criterion of stone for the project should be such as: the usage of the building, the location of applied stone, color, design and bookmatch, type of final surface finish, required quantity and availability, stone price and budget proportionality, technical information and stone tests, etc. Stone selection criteria should be evaluated in a wide range of marble, granite, travertine and marble stones to create a special value for the project by cleverly selecting the stone.

At DEEPA's head office, consultancy services for selecting natural stones are provided to employers and their consultants, so that they have the best selection according to different criteria. After providing decision makers' opinion and agreement on the stones needed for the project, the DEEPA experts apply the order and supply of the required stone (in our factories or imported stones warehouse) based on the specified criteria, and during the delivery of the stone to the project and the stages of stone installation will be present at the project and will provide the necessary services.

In recent years, DEEPA has offered project-oriented stone services for buildings, and with attendance alongside employers and their consultants, fully meets the project's stone needs. In this way, in addition to its existing products and imports, based on the needs of the project, considers necessity of products and imports for its factory and warehouses.

Stone For Special usages

Today, stone has a special place in some industries, and the existence of collections that produce stone and also closely relate with different industries will facilitate the use of stone for these industries.

DEEPA is trying to organize the group's products in order to meet the needs of the industry by identifying the need for various types of natural stone.

Stone for the floor covering of the elevator cabin

Natural stone is one of the most suitable options for covering the floor of the elevator cabin, DEEPA produces a large number of stones used by the elevator industry at its own factories and imports a number of foreign stones from its trading sector from different countries and, in order to provide easy access for traders, delivers a wide range of slabs used in elevator cabins for its respectable customers in Tehran Warehouse.

EASY & FAST INSTALLATION

Stone for the cover of pool table

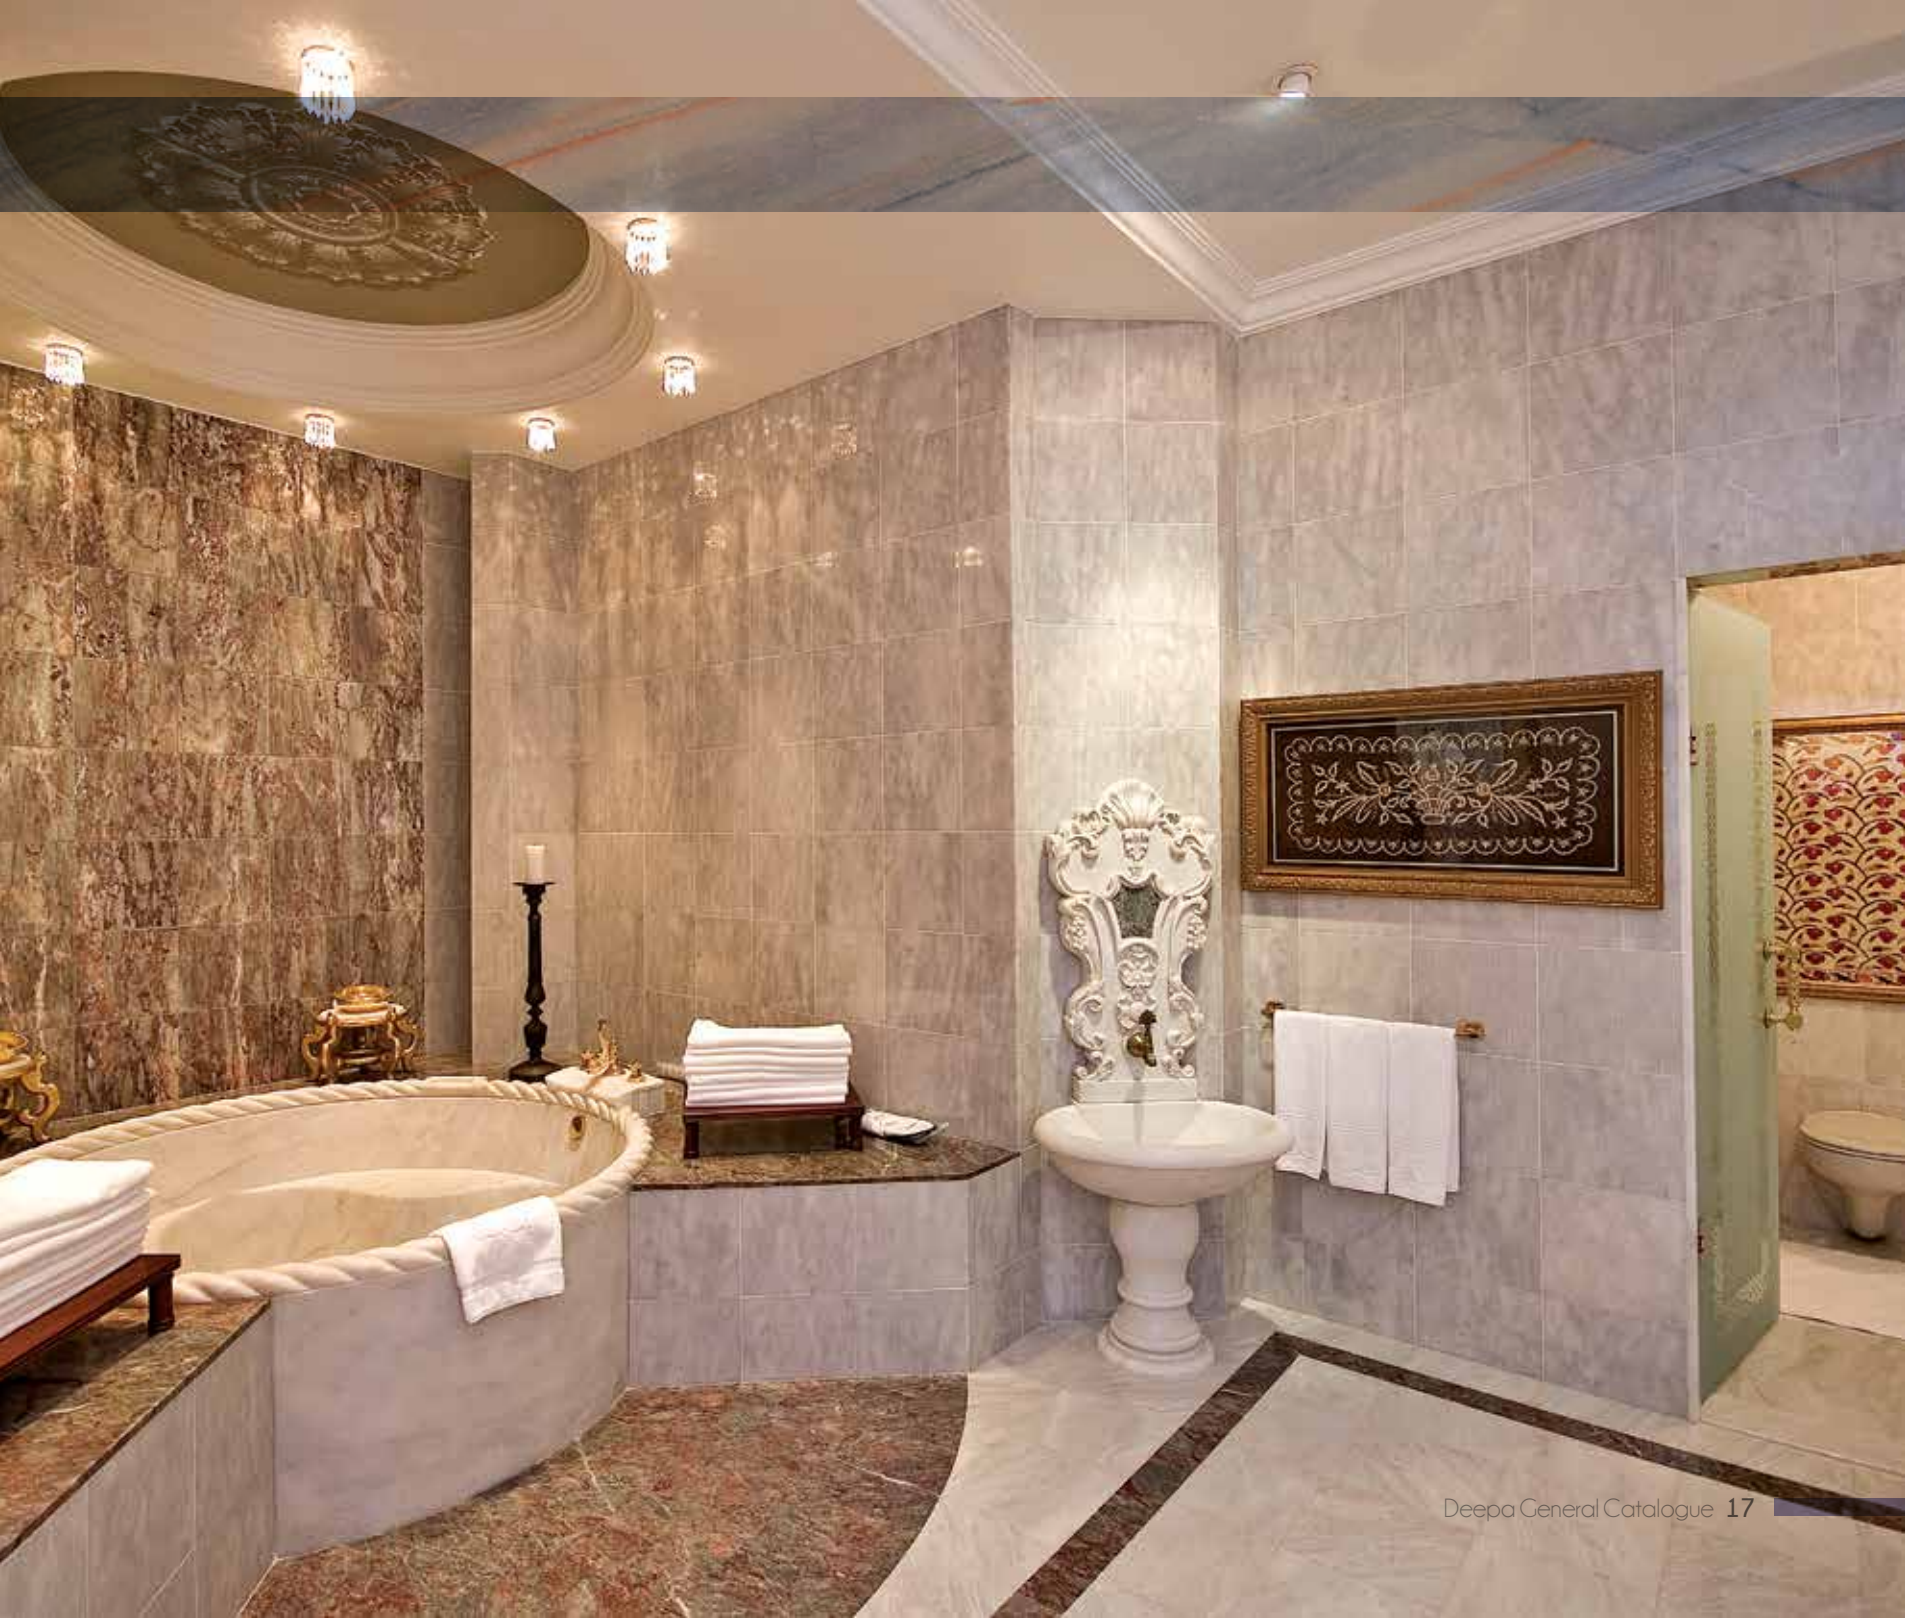

Pool tables are produced in a variety of sizes and styles, and their surfaces are usually made of several pieces of stone. Multi-piece stones prevent the table from dampening due to atmospheric changes. (Smaller tables usually made from a one-piece stone). Thickness, size and material of stone are factors that affect the quality of the table and its proper function. DEEPA, in interaction with the pool table designers, has provided them limestone and crystal stones with custom thicknesses and dimensions.

BRINGING TOGETHER LUXURY+ ART

Stone for decoration

Stone statues and panels have a distinguished role in interior spaces, facades of buildings, urban decoration and etc. DEEPA is ready to bring the ideas of designers and architects in this arena with the use of advanced tools and pro sculptors.

INFINITE DESIGN POSSIBILITIES

Stone for countertops

Countertops have an important role in creating a glorious atmosphere in residential, commercial and office areas. Countertops in addition to withstanding the load, must resistance to impact, wear, moisture and environmental factors. Nowadays, artificial stones (corian, quartz, etc.) have a significant share in the production of countertops, yet natural stones have retained their place and support. Granite and marble stones are used to produce countertops according to the usage and designers and employers views. DEEPA provides designers and interior decorators with a variety of foreign granites and domestic marbles with a thickness of 3 and 4 centimeters for the production of countertops.

ields of Activity

- Stone for Projects
- Stone for Special Usages
- Export

1. Marketing and identification of new customers
2. Provide general information about the group products to new customers
3. Receiving the customer's requirements in terms of the type of stone, the standards required, and the amount needed
4. Match the customer's needs with the products and potential of DEEPA
5. Sending information to the customer and obtaining initial confirmation
6. Send physical sample in small cut and photo of the product dump (blocks, slabs and tiles)
7. Submitting the invoice to the customer and obtaining final confirmation
8. manufacturing the product and inspection during production
9. Packing and obtaining customer's demanded certificates (SGS, CE, BV, etc.)
10. Lading and shipment in accordance with the agreements

DIFFERENT COLORS

Export

Iran has the world's fourth largest resources of stone, and Iranian stone companies, based on these unique resources, can export their products to different countries of the world.

DEEPA mines and factories have always sought regional and overseas markets for their products, and export their products in form of blocks, slabs and tiles to different countries.

At DEEPA, all export steps are carried out under the supervision of the headquarters experts and in accordance with the following process:
